

1                   **ABSTRACT OF THE DISCLOSE**

2                 A horseshoe is made from a metal matrix composite. The metal matrix contains  
3                 particles of a silicon boride composition. The preferred metal is aluminum and the  
4                 preferred form of the silicon boride is silicon hexaboride. The horseshoe is lightweight  
5                 and has superior wear resistance and good vibration damping characteristics.
